

Math King eLearning environment

Background

Mathematics is the Queen of sciences. All countries of success have invested in education, ensuring their young generations would learn mathematics.

Countries with long and difficult transportation routes, lack competent teachers in remote regions.

MathKing is an eLearning package of Mikrolinna Oy Finland. It is a full family of eLearning solutions for mathematics, physics, and chemistry. MathKing was created by Finnish teachers, known to be among the most competent and dedicated teachers in the world, as shown in scientific assessments like “PISA”.

The purpose of Math King is to educate, to enable learning and not to be entertainment or advertisement.

The main competitive edges in Math King – subject mathematics

- ➔ **Plenty of problem solving and tests**
- ➔ **Plenty of verbal tasks, not only calculation**
- ➔ **With versatile material the program enables differentiation and repetition**

- ➔ Numerical values in exercises are renewed automatically
- ➔ Tips including graphics, animations, texts, diagrams, formulas etc.
- ➔ Illustrative animations

There is a special tool for teachers:

- ➔ Possibility to choose different exercise repertories for specific students or groups
- ➔ The solution saves individual students results, which can be later reported in several ways and also monitored on-line

Easy to translate and localize, but

In co-operation we need:

- a university to make qualification of new language version
- a company/university to make translation and localization decisions or assist us on it
- a company to represent the product in your country (selling, technical aid, training)
